

Eng. Sci. Admissions January 2023

Some contextual information that may be useful when colleges are composing feedback letters

This year we received 1031 applications and 1012 applicants registered for the PAT

All applications were assessed independently by tutors from two colleges. The scores from these assessments were then combined with the PAT scores and contextual data to create a short-list.

Following a meeting of all tutors we short-listed 416 candidates

All of these shortlisted candidates were interviewed on-line by two colleges independently. Once the interviews were completed the tutors meet again twice and made offers to 195 applicants.

This means that we short-listed 2.13 candidates per place.

For the whole cohort the mean UCAS grade for the applications was 7.7. The mean mark for the PAT was 48.2% and the standard deviation was 15.5%.

For the short-listed candidates the average UCAS grade was 8.17 and the mean mark for the PAT was 59.3% and the standard deviation was 12.9%.

For candidates who were made an offer the average UCAS grade was 8.24 and the mean mark for the PAT was 62.3.6% and the standard deviation was 12.4%.

I hope that some, if not all of this information, is useful.
