

Somerville College The Ratan Tata Building Newsletter Kingerlee

Date: 29th May 2026

The site team have continued the enabling and investigation works over the last period with the archaeology team in attendance.

To the west of the site, the team have been assisting the Archaeologists to expose and record a Victorian brick floor which once removed exposed the remains of some earlier stone footings.

With all the existing services exposed, a full survey has now taken place to map out the Ratan Tata's new connections for drainage, power, water and data.

The former boiler room in the courtyard within Somerville College Park building has been removed in readiness for the wall to be demolished.

These works have uncovered a section of the historical wall that needs to be assessed before the demolition takes place. The next element of works will be to complete several service diversions and stabilise the historical wall.
