Date: 17<sup>th</sup> September 2026

Over the past two weeks, the site team has continued to make good progress with the foundation works across the site. Piles have been excavated and cropped to the required levels, followed by concrete blinding to provide a clean and level working surface. Reinforcement has then been installed to form the pile caps and ground beams. Concrete has been successfully poured across the completed areas, with testing carried out throughout. Works to the tower crane base are also progressing in preparation for the future crane installation.

Moving forward, the team will continue this sequence across the remaining foundation areas, progressing the substructure works across the site.
